

TRACHEAL AND URETHRAL STENTING

Thursday, July 3rd, 2014
Copenhagen, Denmark
ECVS Annual Scientific Meeting

Intensive Seminar Combining “How-To” Lectures
and Laboratory Training

The goal of this course is to teach the attendees how and when to place tracheal and urethral stents. The lecture portion will cover indications, workup, techniques, client expectations/outcomes and case management for both stenting procedures. Lab stations will then be set up to demonstrate stent deployment, stent sizing and demonstrate equipment handling on cadavers. Both fluoroscopic and digital radiographic techniques will be instructed. At the conclusion of the lab, enrollees will be able to place both types of stents, understand the indications for stent placement and be familiar with post-operative management of these cases.

Hands-On Instruction from Industry Experts

Course Fee: €400 (€500 after May 31st)
Spaces Limited

You may sign up for the course through registration for the ECVS Annual Scientific Meeting by clicking [here](#).
