

Feline Soft Tissue Surgery Course

Date and Location: 9th - 16th October 2021, Online Webinar
20th - 21st October Residential Part in Vienna / Austria
Course Organization: European School for Advanced Veterinary Studies

Dear Colleagues!

The ESAVS is happy to offer this course to all surgeons, residents and general practitioners eager to deepen their knowledge in feline soft tissue surgery.

This training program will give you the opportunity to learn about specificities and idiosyncracies in soft tissue surgery in cats and differentiate it from the corresponding care in dogs. We will cover a broad range of feline surgical topics. Basic knowledge is delivered through recorded webinars that you can listen to at your own pace. Surgical diseases and necessary skills are presented in interactive online sessions. Your understanding is evaluated through daily assignments, and we will work together on surgical skills specifically adapted to cats. Finally, practical sessions will give you hands-on experience that you can apply to your clinic work with cats.

Practical sessions

Vienna/Austria, 20 - 21 October 2021

- Abdominal anatomy
- Gallbladder surgery
- Small intestines/Large intestines
- Diaphragmatic hernia
- Urinary tract surgery
- Ear surgery: VBO, LBO, TECA, Thyroid
- Reconstructive surgery FISS
- Single-double mammary strips
