AOVET Masters Course—Equine Arthrodesis Techniques and Fracture Fixation

Chairpersons: Anton Fürst, Christoph Lischer, Jose Garcia-Lopez

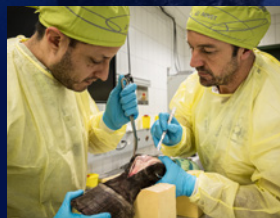

Faculty and Speakers: Jörg Auer, Fabrice Rossignol, Alan Ruggles,
Felix Theiss, Jeffrey Watkins

The AOVET Equine Course 2019 will utilize both cadaver and artificial legs as part of the learning experience, making it an even more attractive educational opportunity. This Masters course will focus on very common and important osteosynthesis techniques used in the surgical treatment of racehorses as well as in companion animals. This course is for equine surgeons, who are familiar with the basic knowledge and have attended an AOVET Principles course in Equine Fracture Management.

The course will cover arthrodesis techniques of the hind and front leg and carpal and metacarpophalangeal joints., using plastic bones and cadaveric specimens to teach the technique and the approach as well as the handling of the soft tissue. These teaching tools offer many advantages and will be a highlight of the course. Moreover participants will learn the approach and the fixation of other bones.

This AOVET Master course will focus on the approach, the reduction and fixation of these arthrodesis and fixation techniques.
